

OrderStatus::getInstance

OrderStatus::getStatus

OrderStatus::OrderStatus

```
graph LR; A[OrderStatus::getInstance] --> C[OrderStatus::OrderStatus]; B[OrderStatus::getStatus] --> C;
```

The diagram illustrates a design pattern where two methods, `OrderStatus::getInstance` and `OrderStatus::getStatus`, are associated with a single class constructor, `OrderStatus::OrderStatus`. The methods are represented by white rectangular boxes on the left, and the constructor is represented by a gray rectangular box on the right. Two blue arrows point from each method box to the constructor box, indicating that both methods likely utilize the constructor to create or retrieve an instance of the `OrderStatus` class.
