```
graph LR; A[RestaurantManager::searchRestaurantsByCuisine] --> F[RestaurantManager::searchRestaurants]; B[RestaurantManager::searchRestaurantsByFeatures] --> F; C[RestaurantManager::searchRestaurantsByLocation] --> F; D[RestaurantManager::searchRestaurantsByOperatingHours] --> F; E[RestaurantManager::searchRestaurantsByPriceRange] --> F; G[RestaurantManager::searchRestaurantsByType] --> F;
```

The diagram illustrates a design pattern where multiple specific search methods (A through G) are implemented by delegating to a single, more general method (F). The specific methods are arranged vertically on the left, each in its own box. Arrows from each of these boxes point towards a single box on the right, which represents the general searchRestaurants method. This suggests that the specific methods are likely wrappers or delegates for the general search functionality.
